Air and Water Balancing - Sound and Vibration Testing - Cleanroom Services - Building Commissioning - Building Envelope Testing - Thermal Imaging

Neudorfer Engineers

Thermal Imaging

Neudorfer Engineers is a leader in non-destructive testing with the application of thermal imaging.

With certified A.S.N.T. Level II Thermography, specializing in building heat loss, NEI is capable of identifying heat loss without any disruption to building operation.

Thermal Imaging is a growing field in non-destructive testing of buildings, mechanical systems and electrical systems. Annual surveys can find problems before critical shutdown occur saving time and money in any plant operation.

- Thermal Imaging is an excellent tool in nondestructive testing to find anomalies in buildings, mechanical and electrical equipment.
- Thermal Imaging can be used in conjunction with Blower Door Testing while the building is in either a positive or negative pressure condition. In this mode, leaks of all sizes can be easily detected.
- Thermal Imaging is an excellent tool for identifying the improper alignment in bearings, couplings, pumps and belts by identifying the related thermal hot spots.
- Thermal Imaging is an excellent tool for identifying failing electrical equipment as well as poor electrical connections and other related electrical issues.

Neudorfer Engineers – Seattle

5516 1st Avenue S. Seattle, Washington 98108
Phone: 206-621-1810 Fax: 206-343-9820
